About me

People tend to see me as an intelligent, calm and collected guy. In school I am often the one people go to when they have a problem, especially in classes that require logic and reasoning skills, such as the natural sciences and programming.

I like learning and I like understanding what I am working with, I am rarely satisfied with just getting a thing to work, I want to understand how and why it works. This also allows me to troubleshoot much more easily. In interpersonal relationships, my friends often come to me with their problems, my calm and analytical nature allows me to listen to and understand problems and conflicts, I am good at seeing both sides of a problem and come up with practical solutions and resolve misunderstandings.

Education

School internship with a focus on programming at Aarhus Tech

(Juli 2018 - present)

School internship is about simulating the conditions at a normal workplace, we have a 37 workweek. We focus on independent programming projects, where I have been working with HTML.

Communication and IT introductory course at Aarhus Tech (Grundforløb)

(January 2018 - June 2018)

I have finished the basics of computer networking, and server setup with a grade of B. We worked in teams and learned to plan and solve an IT problem as a group.

Say-IT at Kompetencehuset

(October 2017 – January 2018)

An IT course of 20 hours a week, where we could study whatever subject we wanted, chose to learn Python programming.

Every Monday, after most people had left, I arranged for a small group from the course to be allowed to use the rooms for Dungeons and Dragons, which we had a lot of fun with.

Math at Aarhus University

(June 2016 – August 2017)

I studied math at Aarhus University for one year. I learned a very analytical approach to problems, but after a course in Java programming, I discovered that I found programming much more exciting than the rest of the curriculum.

Select passed courses:

- Introduction to programming
- Perspectives in math

Psychology at Aarhus University

(September 2012 – June 2016)

I studied Psychology at Aarhus University, before finishing my bachelor I did however decide that this was not the path for me.

I still learned a lot about understanding other people, and why they might act as they do, this has given me patience even for people I might disagree with.

Gymnasium (HTX)

(September 2009 – June 2012)

We had a focus on group projects, I have always worked well with others, but in my HTX years this was really cemented. In technic we programmed a PIC-chip to control our electric circuits.

Classes on A-level:

	Oral	Written
Physics	12 (A)	12 (A)
Danish	10 (B)	7 (C)
Math	12 (A)	10 (B)
Technic	7 (C)	7 (C)
Chemistry	12 (A)	10 (B)

Weighed average of all classes: 10.4

Employment History

Live action roleplay teacher at Klemmenser Ungdomsskole

(November 2011 – May 2012)

Here I learned to plan and lead an activity for others.

I set up small scenarios once a week for us to play out, while making sure everyone played safely and fairly with each other.

Summer job, Krølle Bølle bar Sandvig, Kitchen worker

(June 2008 – July 2008)

Here I developed my skills to work under pressure.

I worked the dishwasher in a small kitchen over the summer, learning to work in a busy kitchen, where things had to be done quickly and properly.

Bornholms kommune, byggekontolet Tejn, piccoline

(November 2007 – December 2009)

Here I learned to structure my work efficiently.

The job was mainly retrieving and archiving case files.

Hobbies & Interests

Table top role playing: I am the Game Master of our little group's weekly gaming session. We go on seafaring adventures in the imagination, where the others get to fight pirates, slay dragons, and solve the riddles I prepare.

I am currently writing my own rules system for such games, to suit the play style I prefer, if it turns out as well as I hope, I might also try to publish it in a few years.

Magic The Gathering: Magic is a collectable trading card game, you buy packs of random cards, and then you trade and play with your friends. I play on a casual level down in the local game store, and with friends as a fun social activity.
